

MANA Operations Platform

System Walkthrough & Demo Guide

A screen-by-screen and workflow-by-workflow tour of everything built so far — across the Staff / Admin platform, the Customer portal, and the Vendor portal.

Essential Ocean Foods (EOF) • “Mana” • July 2026

How to Read This Guide

MANA is the internal operations platform for a perishable-seafood distribution business: it takes an order, matches it to fish arriving from overseas vendors, allocates specific boxes to specific customers, and produces the paperwork and financial follow-up around that flow. The platform is built on **Next.js** (the web app) and **Supabase** (Postgres database, authentication, file storage, and row-level security).

There are three kinds of users, each with their own sign-in and their own set of screens:

Staff / Admin

The MANA team (ops, finance, owners)

Runs the whole operation: orders, inventory, allocation, pick slips, finance, vendor & customer management.

Customer

Restaurants & seafood buyers

Self-serve portal: place orders, see their own pricing, track orders & invoices, file quality claims.

Vendor

Overseas suppliers of fish

Self-serve portal: submit packing lists, track shipments & lots, view settlements — once verified by staff.

What the status tags mean

LIVE

Fully wired to the live Supabase backend — real data is read and saved. Safe to demo end-to-end.

MIXED

Partly live: the core of the screen reads/writes real data, while some panels are still on sample data.

PROTOTYPE

A complete, interactive UI running on realistic sample data. The screen works and clicks through; backend wiring is the next step.

Demo tip: *the story that lands best is a single order of fish traveling all the way through — vendor ships it, staff receive and allocate it, the customer who ordered it gets it, and finance/claims close it out. The five workflows at the end of this guide walk exactly those paths.*

1 Staff / Admin Platform — “Mana”

This is the internal control room used by the MANA team. It has a fixed left-hand navigation grouped into **Operations**, **Finance**, **Overview**, and **System**. Below, every screen is listed under its nav group.

OPERATIONS

Allocation Board </mana/allocation-board>

LIVE

The heart of the platform: match arriving fish to customer orders by dragging boxes onto orders.

- Two panes: customer **orders** on one side (with a live fulfilled-vs-target progress bar per species), physical **lots** → **boxes** → **portions** on the other.
- Click or drag a portion onto a matching order; **split** a box across two customers or **merge** it back.
- Warehouse toggle (SFO / LAX), and a **Lock board** action that freezes the plan and sends it to Pick Slips.
- Inventory now loads live from packing lists staff accept in the Documents Inbox; assignments are held in-session for now.

Order Intake </mana/order-intake>

LIVE

Capture a phone order in under 30 seconds.

- Customer autocomplete that auto-fills their tier & carrier defaults.
- Species + **grade** toggles (the same species at two grades are two separate lines), quantity steppers.
- A live order ticket with pricing and totals; writes the order straight to the database.

Order Inbox </mana/order-inbox>

PROTOTYPE

Turn inbound emails / texts / voicemails into clean orders with an AI parser.

- Side-by-side raw message and parsed draft, with low-confidence fields highlighted for review.
- Accept / reject / restore, plus a queue with a parse-rate KPI strip.

Orders </mana/orders>

LIVE

The master list of every order, with routing and delivery details.

- Filter by status, warehouse, or search; a “**warehouse unassigned**” toggle surfaces orders needing routing.
- Expand a row for line items, delivery info, and transport fee.
- Assign an order to a warehouse (SFO / LAX) or mark it a **direct** shipment (ORD / HNL); inline transport-fee editor for deliveries.

Lots & Inventory </mana/inventory>

PROTOTYPE

Receive product and track lots through their lifecycle.

- Import a vendor packing list (CSV with per-vendor column mapping) or add a lot by hand.
- Lot rows expand into box cards showing mixed-species contents, weights, and customer tags.
- Note: live receiving now happens through the Documents Inbox; this screen is the fuller prototype for lot management.

Customers [/mana/customers](#)

LIVE

The customer master file.

- Search + filters (tier, status, location, date); a detail drawer per customer.
- Drawer shows order defaults (carrier, terms, location), per-SKU price overrides, and standing orders.
- Add or edit a customer, including their pricing tier and channel preference.

Pick Slips [/mana/pick-slips](#)

PROTOTYPE

The print-ready packing slip generated for each customer after the board is locked.

- One tab per locked order; a clean document with ship-to, carrier, and pickup time.
- Boxes grouped by species with weights and checkboxes, packing instructions, and a signature line.

Documents Inbox [/mana/documents](#)

LIVE

Where staff turn vendor-submitted paperwork into shipments and inventory.

- Filter New / Processed / All; each submission shows totals and a line-by-line preview.
- **Create shipment** (AWB, origin, destination, ETA) and, on save, the packing-list lines are **materialized into inventory** (lot → boxes → mixed-species contents) that appears on the Allocation Board.
- **Generate invoice** opens the branded commercial invoice / packing list; a status control advances the shipment (expected → in transit → arrived / delivered), which the vendor sees.

FINANCE

Price Sheet [/mana/price-sheet](#)

PROTOTYPE

The master pricing reference.

- Base price per SKU plus tier overrides (T1 / T2 / T3) and stock status (available / incoming / low / out).
- Inline price editing and a printable view.

Purchase Orders [/mana/purchase-orders](#)

PROTOTYPE

Track vendor POs through order → received → invoiced → reconciled.

- Three-way match (ordered vs received weight, PO vs invoice rate) with variance flags.
- Lifecycle actions: record received, record vendor invoice, mark reconciled or dispute.

Finance Queue [/mana/finance-queue](#)

PROTOTYPE

Approve invoices and manage QuickBooks (QBO) sync.

- Cards for pending approval, failed sync, and synced-today.
- Approve & sync, or fix & retry failed syncs with the error shown.

Credits & Downgrades [/mana/credits](#)

MIXED

Handle customer credit claims and log product-grade downgrades.

- **Claims tab (LIVE):** customer-filed claims with box #, weight, and uploaded **photos**; approve (generates a QBO credit-memo ref), send a partial **counter-offer**, or reject.
- **Downgrades tab (prototype):** a log of grade changes (e.g. A → B) with weight and dollar impact.

Vendor Reconciliation [/mana/vendor-reconciliation](#)

PROTOTYPE

Build a settlement statement per vendor per lot.

- Sold weight & price, cost basis, quality-credit deductions, net due.
- Negotiation lifecycle: draft → sent → countered → settled, with an activity trail and print/PDF.

OVERVIEW (dashboards)

Operations Dashboard [/mana/operations-dashboard](#)

PROTOTYPE

Live-style operational snapshot.

- KPIs (boxes available, open orders, shortages, pick slips pending), inventory by species, open shortages, today's receiving.

Finance Dashboard [/mana/finance-dashboard](#)

PROTOTYPE

Financial snapshot.

- Invoiced amount, AR aging buckets, revenue & margin by species, recent credit activity.

Executive (CEO) Dashboard [/mana/ceo-dashboard](#)

PROTOTYPE

Leadership overview.

- Revenue, gross margin, boxes shipped, open shortages; inventory position by warehouse and a **buying-intelligence** table recommending what to purchase.

SYSTEM

Notifications [/mana/notifications](#)

PROTOTYPE

Alert inbox and delivery preferences.

- Inbox with type badges and channel indicators; preferences grid for in-app / email / SMS per event type.

Vendor Verification [/mana/vendor-verification](#)

LIVE

Approve or reject vendor sign-ups before they can submit anything.

- Tabs for Pending / Verified / Rejected; approve a vendor or reject with a written reason the vendor then sees.
- This is the gate that unlocks the vendor's ability to submit packing lists.

Settings [/mana/settings](#)

LIVE

Personal profile and password.

- Profile card (name, email, role, location) and change-password via Supabase auth.

Admin [/mana/admin](#)

MIXED

The system administration console.

- **Live:** Users & Roles (with an add-role action), SKU master index, and pricing tiers with species-level overrides.
- **Prototype:** vendor mappings and external-integration configuration panels.

ENTRY / AUTHENTICATION

Staff Login [/login](#)

LIVE

Staff sign-in that routes each user to the right place by role.

- Email + password via Supabase auth; role lookup decides the landing screen.
- Links out to customer and vendor self-signup.

Customer Sign-up [/signup](#)

LIVE

Self-service registration for new customers.

- Business + contact details create the account and sign the customer straight into their portal.

Vendor Sign-up [/vendor-signup](#)

LIVE

Self-service registration for new vendors.

- Creates the vendor account (which then waits for staff verification) and signs them into their portal.
-

2 Customer Portal

A self-serve web portal for restaurants and seafood buyers. Customers sign themselves up, and every screen is **row-level-security scoped** so each customer only ever sees their own data — never another customer's, and never cost, margin, or vendor information. Left-nav: Dashboard • Place an Order • My Orders • Price Sheet • Invoices • Quality Claims • Settings.

Dashboard [/portal](#)

LIVE

A snapshot of the customer's account activity.

- KPI cards: open orders, and this month's orders, pounds, and spend.
- Recent orders table and a prominent **Place an order** call-to-action.

Place an Order [/portal/order](#)

LIVE

Where the customer builds and submits an order.

- Species + **grade** selection showing **their** price per lb, quantity steppers, and a ship-date picker.
- **Delivery or pickup** toggle; if delivery, an address field appears; contact details prefill from the account.
- A live order summary with line totals; submit creates the order and shows a confirmation.

My Orders [/portal/orders](#)

LIVE

Full order history.

- Each order expands to line-by-line detail (species, grade, weight, unit price, subtotal) plus warehouse and carrier.

Price Sheet [/portal/price-sheet](#)

LIVE

The customer's own current pricing.

- Species / grade / your-price-per-lb, resolved from tier pricing and any customer-specific overrides.

Invoices [/portal/invoices](#)

LIVE

The customer's invoices and balance.

- Outstanding-balance total up top; a table of invoices with paid / overdue / open status.

Quality Claims [/portal/claims](#)

LIVE

Report a quality or short-weight problem on a delivery.

- Claim form: related order, species, **box #**, **weight**, a description, and **photo uploads** (stored privately).
- A history list of the customer's own claims with status and photo count. These feed the staff Credits & Downgrades screen.

Settings [/portal/settings](#)

LIVE

Account info and password.

- Read-only account details (with a “contact our team” hint) and a change-password form.

3 Vendor Portal

A self-serve portal for the overseas suppliers who ship fish to MANA. Like the customer portal it is **RLS-scoped** — a vendor sees only their own documents, shipments, and settlements, and never sees sell prices, margin, customers, or other vendors. A key rule: a vendor must be **verified by staff** before they can submit anything. Left-nav: Dashboard • Submit Packing List • My Documents • Shipments & Lots • Settlements • Settings.

Dashboard [/vendor](#)

LIVE

The vendor's home, gated by verification status.

- If not yet verified, a status banner explains it (pending, or rejected with the reason) and the submit button is hidden.
- Once verified: KPI cards (documents in review, active shipments, lots with us, open settlements) and recent documents.

Submit Packing List [/vendor/upload](#)

LIVE

A structured form the vendor fills in per box (verified vendors only).

- Destination (SFO / LAX = warehouse, ORD / HNL = direct), packing-list #, AWB, received date, and a **kg / lb** unit toggle.
- One line per species/grade with box #, species, grade, box type, gel ice, pieces, and weight; lines sharing a box number count as **one physical box**.
- Vendors no longer send their own invoice — MANA generates the professional, watermarked invoice from this data.

My Documents [/vendor/documents](#)

LIVE

Everything the vendor has submitted.

- Filter All / In review / Processed; each row shows type, destination, submitted date, and status (received / in review / processed).

Shipments & Lots [/vendor/shipments](#)

LIVE

Track product in transit and already received.

- Shipments table (AWB, origin, destination, routing, ETA/arrived, status) — the status staff set is reflected here.
- Lots table (lot code, location, received date, status) for product now in the warehouse.

Settlements [/vendor/settlements](#)

LIVE

The vendor's financial settlement statements.

- Open net-due total; each statement expands to line items (credits, downgrades, etc.) with amounts and status.

Settings [/vendor/settings](#)

LIVE

Vendor account info and password.

- Read-only vendor name, code, and payment terms, plus a change-password form.

4 End-to-End Workflows (the demo highlights)

These are the joined-up journeys that cross screens and roles — the best things to actually click through in a demo. Each step is labelled with the role and the screen involved.

A. From order to loading dock

The core operations loop — how an order becomes packed boxes.

- 1 Customer / Staff** An order arrives: the customer places it in the portal (*Place an Order*), or staff key it in fast on *Order Intake*, or it's parsed from an email in *Order Inbox*.
- 2 Staff – Orders** The order lands in *Orders*; staff route it to a warehouse (SFO / LAX) or mark it a direct shipment, and set delivery vs pickup + any transport fee.
- 3 Staff – Allocation Board** Staff drag specific boxes/portions of fish onto the order until each species hits its target, splitting boxes across customers where needed.
- 4 Staff – Allocation Board** When the plan is complete they **lock the board**, freezing the allocation.
- 5 Staff – Pick Slips** A print-ready pick slip is produced per customer — boxes grouped by species, with packing instructions and a signature line.

B. Vendor onboarding to received inventory

How fish from a supplier becomes draggable inventory — and how the vendor stays informed.

- 1 Vendor** A new supplier signs up (*Vendor Sign-up*) and sees a “pending verification” banner — they can't submit yet.
- 2 Staff – Vendor Verification** Staff approve the vendor (or reject with a reason). Approval unlocks the vendor's submit button.
- 3 Vendor – Submit Packing List** The verified vendor fills the structured packing-list form (boxes, species, grades, weights, kg/lb) and submits — no invoice needed.
- 4 Staff – Documents Inbox** The submission appears as “New”. Staff review it and **Create shipment** (AWB, origin, destination, ETA).
- 5 System** On save, the packing-list lines are turned into real inventory (lot → boxes → mixed-species contents) — which now shows up on the *Allocation Board*.
- 6 Staff – Documents Inbox** Staff click **Generate invoice** for a branded, watermarked commercial invoice / packing list (print or one-click PDF).
- 7 Staff → Vendor** Staff advance the shipment status (expected → in transit → arrived); the vendor sees it update on their *Shipments & Lots* screen.

C. A quality claim, start to finish

How a problem on a delivery becomes a credit — matching the real “photo + weight” process.

- 1 Customer – Quality Claims** The customer files a claim: order, species, box #, weight, a description, and photos of the problem.
- 2 Staff – Credits & Downgrades** The claim (with its photos and box/weight) appears in the Claims tab for review.
- 3 Staff – Credits & Downgrades** Staff **approve** it (generating a QuickBooks credit-memo reference), send a partial **counter-offer**, or **reject** it — the outcome is recorded against the claim.

D. Grade-level ordering & tiered pricing

Why the same fish can be sold two ways — and why each customer sees a different price.

- 1 Admin – Admin / Price Sheet** Products exist as species + **grade** SKUs; pricing tiers (T1/T2/T3) and per-species overrides are configured centrally.
- 2 Staff / Customer** When ordering, the same species can be added at two different grades as separate lines (e.g. Ahi A+ and Ahi A).
- 3 Customer – Price Sheet / Order** Each customer sees **their** resolved price (tier + any customer-specific override) — never cost or margin.

E. Routing, delivery & the transport fee

How each order's path and delivery terms are decided.

- 1 Vendor / Staff** Destination drives routing: SFO / LAX go to a **warehouse** for allocation; ORD / HNL are **direct** shipments that bypass the warehouse.
- 2 Staff – Orders** A “warehouse unassigned” filter surfaces orders still needing routing; staff assign a warehouse or mark direct.
- 3 Customer – Place an Order** The customer chooses **delivery or pickup**; staff can attach a **transport fee** to delivery orders, shown on the order.

5 Build Status Snapshot

A quick reference for demo Q&A — what's fully live versus a working prototype on sample data. “Live” screens read and write the real Supabase database with per-user security.
